COMBINE & REFINE**QUESTIONS**

Take total emissions and divide it by population to get normalized data of emission per capita.

What is the purpose? Showcasing Carbon Monoxide emissions throughout Australia?

Plot emissions against number of facility, to uncover on average how much CO is being emitted by a single facility.

What information should be showcased?

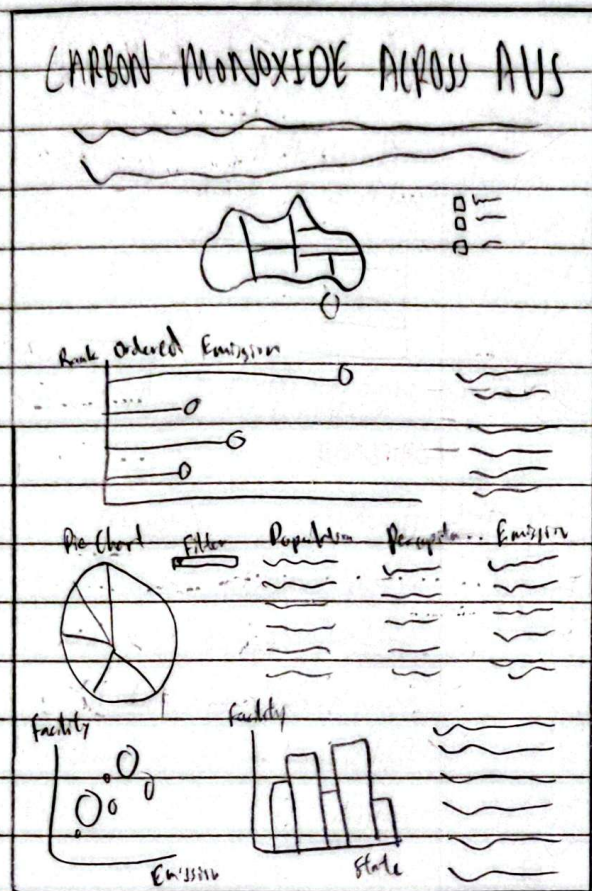

Which charts could properly showcase the information?

Using pie chart to uncover the overall share each state has for emission, for per capita, for population.

Percentage of Emission? Across states?

Overall Population?

LAYOUT

Title: Carbon Monoxide Emission Across Aus

Author: Law Khye Jian

DATE: 14/10/2021

Sheet 2

TASK: Infographic

OPERATION

Having tooltip for the Choropleth map showing a summary of data about Carbon Monoxide and more.

Use a filter for the pie chart to filter/change to focus on different parts of the data.

FOCUS

Main focus is on the choropleth map as it shows the summary of key information for the states

Secondary focus could be the pie/donut chart as it shows how much of a share each state has in the emission

DISCUSSION

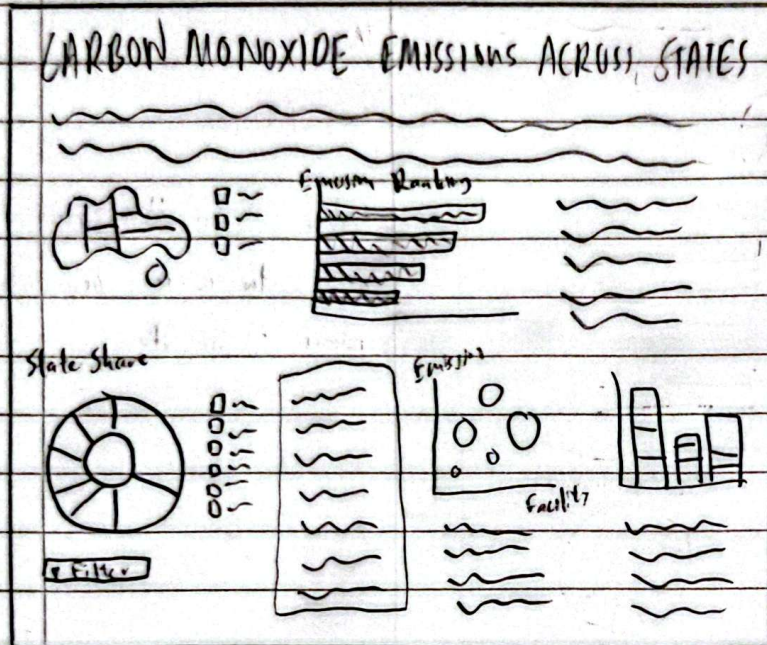

Pros

- More visually engaging layout
- Filtering pie chart saves some space
- Choropleth summary of key values

Cons

- Some information may seem repetitive

LAYOUT

Title: Carbon Monoxide Emission Across States

Author: Low Khye Jian

Date: 14/10/2025

Sheet 3

TASK: Dashboard Design

OPERATION

Tooltip for all idiom present
or the dashboard showing its
title related values

Drop down filter for the donut
chart idiom being able to filter
and check different

FOCUS

Choropleth map for showing the majority of key values
regarding the topic per state.

Donut chart highlights the share of each state for each
key value.

Bubble plot highlights the relationship between Emission and
number of Facility.

DISCUSSION

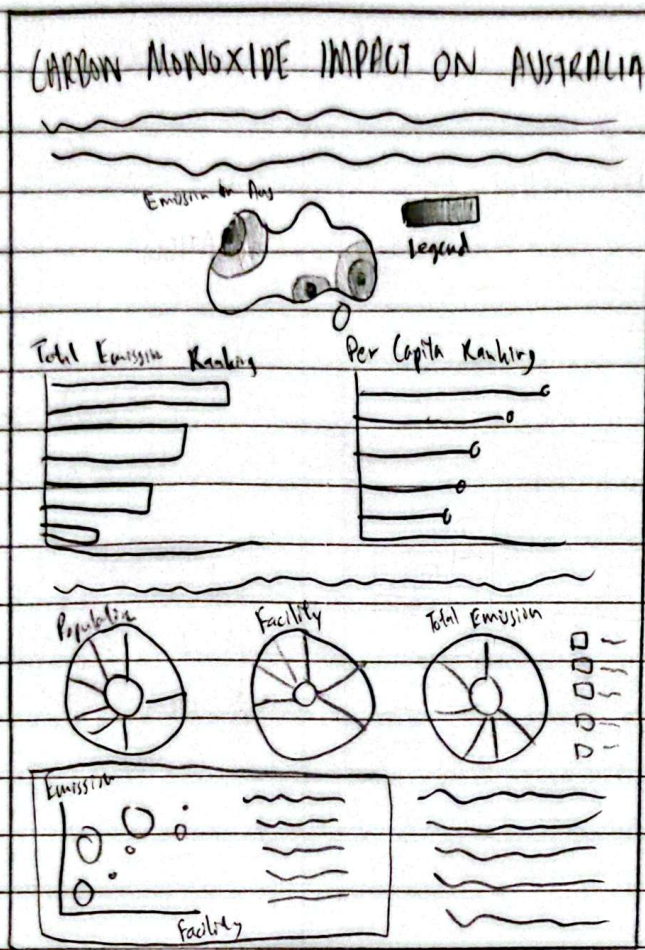

Pros

- Lots of Information, detailed
- Various Idiom to show different relationships between key values

Cons

- Lack of Storytelling, nothing to direct the reader in which direction they should read towards.

LAYOUT

Title: Carbon Monoxide Impact on Australia

Author: Lau Khye Jian

Date: 14/10/2023

Sheet 4

TASK: Infographic

OPERATION

Tooltip for all items present
Showing the relevant key values
related to its title.

FOCUS

Heatmap to show the hotspots of Carbon Monoxide
emission since we have long and lot data of the facilities.

Bar charts to show the ranking of the Total CO Emission
and the per capita CO emission based on states.

Pie Chart, all 3 is shown, allows side by side
comparison of the state share of certain key values.

DISCUSSION

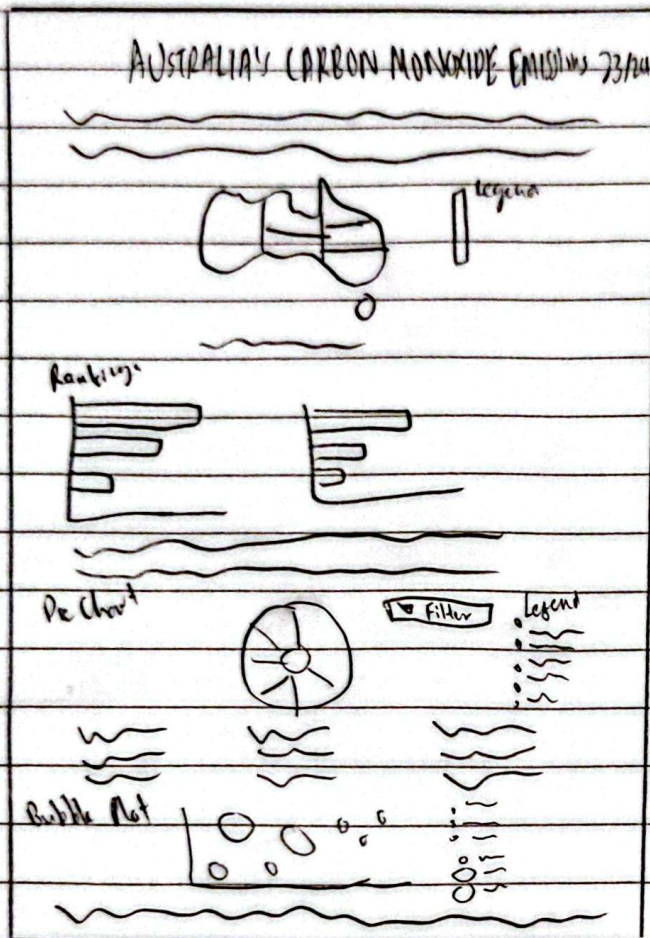

Pros

- Clear storytelling direction
- Various charts showing comprehensive detail on Emissions
- Lot of detailed information

Cons

- Bubble chart may overlap making it challenging to read.

LAYOUT

Title: Australia's Carbon Monoxide Emissions 23/11/21

Author: Low Khye Jian

Date: 14/10/2025

Sheet 5

TASK: Realization Design.

OPERATION

Tool tip for all idiomms present showing the relevant key values related to the title

Added a Filter for the pie chart to show different values.

FOCUS

Choropleth Map shows the general/overall key values of each state. And its colour saturation highlights the severity of Total Carbon Monoxide in each state.

Bar charts highlight the ranking of the state.

Pie chart shows the share each state has for population, total emission and facility count.

Bubble explores the relationship between facility and emissions.

DETAIL

• Normalization of Total emissions based on population, getting per capita values.

• Calculation of Pie chart shares.

• Calculation of Bubble plot Average Emission per facility.

• Requires Github, Vega lite editor.

• 5 days to put all the idiomms together into the Dashboard.
